## From the desk of Editor

**Join the movement for ethical innovation.**

Dear friends,

War has long been seen as a destructive force that brings suffering and devastation to all parties involved. In the modern era, science and technology have played a significant role in shaping the tools of warfare. However, there is a growing concern that these advancements might be turning science into a metaphorical Bhasmasur - a demon character known for destruction.

In this context, it becomes crucial to address the responsibility of scientists, technocrats, engineers, and mathematicians in ensuring that their creations are not used against innocent civilians and children. A call for these professionals to take an undertaking from their employers is an essential step towards promoting peace and preventing the misuse of war machinery. By pledging to uphold ethical principles and refusing to contribute to the development or use of weapons that harm civilians, these individuals can play a vital role in safeguarding humanity.

This second issue features information about employment opportunities and intriguing insights from people who have achieved great success in their careers. The previous issue's math puzzle answers are also available.

While we make every effort to ensure that readers receive error-free content, we would still greatly appreciate it if readers could point out any mistakes or offer helpful recommendations. We value your opinions and comments much and would be happy to hear from you so that we can continue to grow. I hope your reading endeavors are successful and enjoyable.
